

### **Listing of the Claims**

Please replace the claims with the following:

1. (Currently amended) A method of marking a location of a tubular joint comprising tubular ends joined together, the method comprising the steps of:  
creating a cavity into an end surface of one of the tubular ends that are to be joined together;  
inserting a marker into said cavity; and  
subsequently joining the tubular ends so as to seal said cavity.
2. (Original) The method of claim 1, wherein the tubular ends are joined by welding.
3. (Original) The method of claim 2, wherein the tubular ends are joined by forge welding.
4. (Original) The method of claim 1, wherein the tubular ends are joined by a screw thread connector.
5. (Previously presented) The method of claim 1, wherein the tubulars have substantially disk shaped end surfaces that are pressed against each other when the tubular ends are joined.
6. (Original) The method of claim 1, wherein the marker comprises an electronic tag, magnetic or radioactive material.
7. (Original) The method claim 1, wherein the cavity is machined at or near the center of said end surface.

8. (Currently amended) A string of joined tubulars, comprising:  
a marker arranged in a cavity that has been created into an end surface of at least one of the tubulars, and wherein the end surface is pressed against or welded to an end surface of an adjacent tubular so as to join said ends and seal said cavity.
9. (Original) The string of claim 8, wherein said end faces are substantially disk shaped and joined by forge welding.
10. (Original) The string of claim 8, wherein a plurality of joints are provided with markers.
11. (Original) The string of claim 10, wherein each marker transmits a radio, magnetic, radioactive or other detectable signal which is different to the signal transmitted by any other marker.
12. (Original) The string of claim 8, wherein the string is a string of oilfield and/or well tubulars.
- 13 to 26. (Canceled)
27. (Previously presented) The method of claim 2, wherein the tubulars have substantially disk shaped end surfaces that are pressed against each other when the tubular ends are joined.
28. (Previously presented) The method of claim 3, wherein the tubulars have substantially disk shaped end surfaces that are pressed against each other when the tubular ends are joined.
29. (Previously presented) The method of claim 4, wherein the tubulars have substantially disk shaped end surfaces that are pressed against each other when the tubular ends are joined.
